

## CORPORATE VOICE SOLUTIONS NEXT GENERATION NETWORK (NGN)

### IP TELEPHONY

**Do you want to spend your time and money running your business or fixing and upgrading your phones?**

If you're a medium sized business with requirements of less than 30 trunk lines, and has been forced to go for a PRI (30 lines), Nayatel SIP Trunks provide flexibility to let you avail benefits of modern telephony applications.

#### **Why IP Telephony?**

If you're a mission critical corporate and whenever you expand your business, you need to increase phone lines or extension. With PRI services, you are always faced with a dilemma of adding multiple of 30 lines for every expansion regardless of your needs of one or more lines. Whenever you add one PRI to your PBX, you get 30 additional trunk lines at cost of Rs. 140,000.00 to Rs. 170,000.00 including PBX PRI card, IP MUX/HDSL and installation charges). These charges remain fixed regardless you add one or thirty extra lines.

Nayatel's IP Telephony get you out of this locked and inflexible solution and empowers you to add any number of trunks, from one to hundreds without any addition of hardware at your premises. The up-gradation simply requires few commands from Nayatel's Switch and can be done within 24 hours.

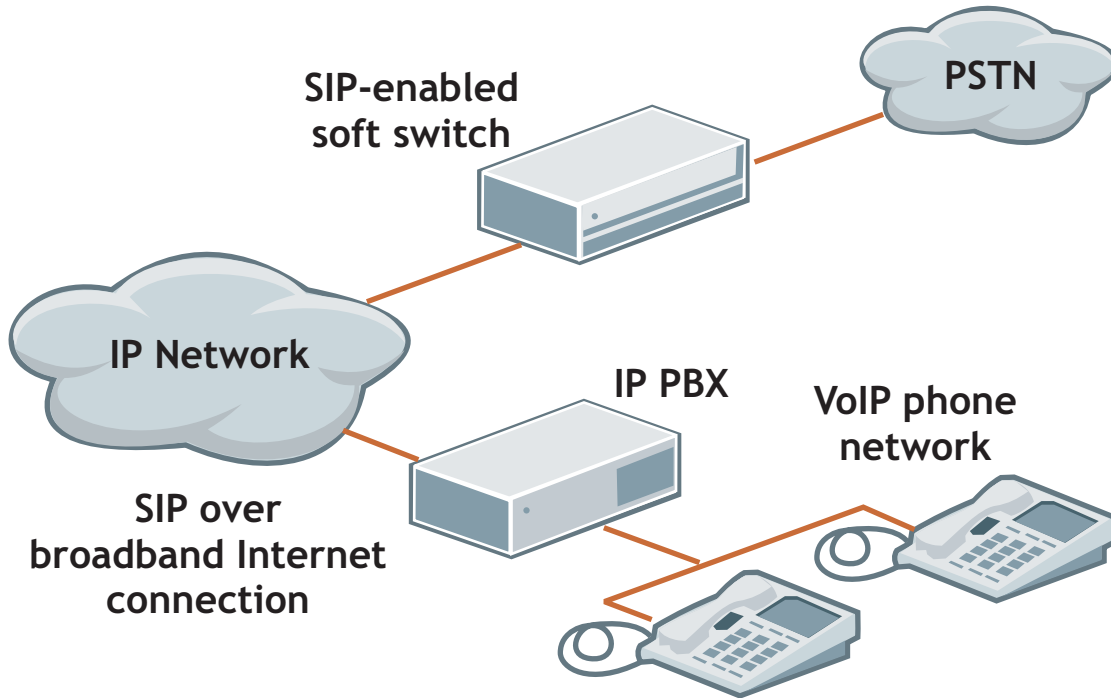

IP Telephony, an interoperable SIP-based VoIP connection established between a Nayatel's NGN switch and a customer's IP PBX, is a best fit for many businesses.

#### **Salient Features**

- ◆ Low fixed costs
- ◆ No up-gradation costs
- ◆ Easy scalability
- ◆ Flexible Numbering Plan
- ◆ Branch offices can have local extension dialing on unified numbering plan

Nayatel's SIP Gateways connects to customer's IP PBX (Asterix based or SIP PBXs) on our fiber network using Ethernet interface.

## Full VoIP SIP Development

A full SIP deployment **operates independently** of the conventional telco infrastructure. All voice signaling and media use the Internet as the only connection between the voice provider and customer
